Sioux Industrial Water Heaters

Sioux has been a leading supplier of water heaters to the concrete industry since the 1960’s. Sioux offers standard units for any size operation, ranging from 415,000 BTUs to 6,000,000 BTUs. Every heater is built to ASME Code, National Board registered, and built to last. These units are designed and built specifically for use in the concrete industry, with continual improvements made each year, providing the features and reliability you require.

Features and Benefits of Sioux Heaters

Sioux water heaters provide an instant and continuous supply of hot water. Operation is simple. Water is pumped through a heating coil, which is heated by an oil or gas burner. Outlet temperature and flow rate can be held at precise levels. Sioux water heaters feature heavy-duty steel construction.

Installation
- A service-rated disconnect is provided on each heater, eliminating the need to add another disconnect switch as required by the National Electrical Code. Increases safety and lowers installation cost.
- Unit is pre-plumbed and pre-wired. Just connect the water heater to required utilities and you’re ready to go.
- One day installation and set-up vs. as long as one to two weeks for other systems.
- Small footprint – using as little as 3’ x 6’ (91.44cm x 182.88mm) floor space for M Series.
- All heaters include a pre-plumbed and pre-wired water circulation pump.

Operation
- Instantaneous and continuous supply of hot water within one minute of start up vs. up to three hours with other systems.
- Adjustable digital temperature control system that monitors and controls water storage tank temperature while in recirculation mode.
- Low flow indicator alerts customer of low water flow conditions.

Maintenance
- Valves are installed for easy deliming of the unit.
- Dual thermometers and pressure gauges provide indication of inlet and discharge water temperature and pressure, which is useful during operation and maintenance.

Quality
- High-quality power gas burner contains flame within combustion chamber, so performance does not vary with the weather. This design is ideal for all installations, including high altitude.
- Optimum combustion chamber provides high efficiency, a clean burn, and low emissions.
- Three-Pass Coil Design is superior to alternative heat transfer methods, giving simple, long-lasting performance which reduces fuel consumption, saving money.

Safety
- Power gas burner and gas train are UL Listed, and are built to ASME CSD-1 code.
- Insulation beneath the external steel jacket provides higher heater efficiency, reducing fuel consumption. Low temperature of steel outer jacket provides a higher safety level.
- Meets Section IV of the ASME code for hot water boilers, third-party inspected to ensure compliance.

Flexibility
- Modular units allow a minimal investment to start, with the option to expand your system as your operation grows.
- Combination oil and gas burners are available.
- Easy conversion from NG to LP or LP to NG in less than five minutes and at no added cost. This feature allows the customer to change to the best available fuel source.
- Application flexibility. Can be run as either a once-through heater, or can be used with a water storage tank.
M Series
Simple Operation

Designed to provide an instantaneous and continuous supply of hot water within one minute of start-up vs. up to three hours with other systems, the Sioux M Series has been a best seller from Sioux for over 50 years. The Sioux M Series’ three-pass coil design is superior to alternative heat transfer methods, giving simple, long-lasting performance which reduces fuel consumption, saving you money. Designed as modular units, the M Series of heaters allows you to make a minimal investment to start, with the option to expand your system as your operation grows. This also gives the heaters a small footprint. Coming pre-plumbed and pre-wired, these heaters are easy to install. Just connect the water heater to the required utilities, and you are ready to go. The entire system is mounted on a rugged steel skid for portability.

- Standard BTU ratings are 1, 2, or 3 million
- Standard primary electricals are 230V/3Ph/60Hz, 460V/3Ph/60Hz, 575/3Ph/60Hz, and 230/1Ph/60Hz
- Available in Oil, LP, Natural Gas or Combination
- Custom Designs Available

HM Series
Reliable Hot Water

Building on the success and popularity of the Sioux M Series, the HM Series continues the Sioux promise of simple operation and reliable equipment while providing enhancements requested by Sioux customers.

With a heat output of 1,700,000 (HM1.7) or 5,000,000 (HM5) BTU/hr and high water flow rates, the HM Series is designed to achieve tank temperatures up to 180°F. The standard Variable Frequency Drive (VFD) allows for precise outlet water temperature control. Additionally, the horizontal design makes service and maintenance a snap due to the easy burner access. The entire system is mounted on a rugged steel skid for portability.

- Standard BTU ratings are 1.7 or 5 million
- Standard primary electricals are 230V/3Ph/60Hz, 460V/3Ph/60Hz, 575/3Ph/60Hz, and 230/1Ph/60Hz
- Available in Oil, LP, Natural Gas or Combination
- Custom Designs Available
Sioux Hybrid Water Heater

Maximizing the Benefits of Coil and Direct-Fired Heating Technologies

The 98.7% true efficiency Hybrid is unlike any other water heater on the market. The water heater maximizes the benefits of coil and direct-fired heating technologies, allowing it to efficiently reach 195°F without producing steam like other direct-fired water heaters. The standard Variable Frequency Drive (VFD) allows for precise outlet water temperature control. The 3,000,000 or 6,000,000 BTU/hr Hybrid water heater is designed for large volume concrete plants with a water storage tank. The entire system is mounted on a rugged steel skid for portability.

- Standard BTU ratings are 3,000,000 or 6,000,000
- Standard primary electicals are 230V/3Ph/60Hz, 460V/3Ph/60Hz, and 575V/3Ph/60Hz
- Available in Oil, LP, Natural Gas or Combination
- Custom Designs Available

Advantages of the Sioux Hybrid Water Heater

- The Sioux Hybrid has been designed to maximize the benefits of coil and direct-fired technologies to create a high efficiency system that achieves third party tested, 98.7% true efficiency.
- The Sioux Hybrid’s coil section of the design heats the water to high temperatures where it cannot escape as steam. Unlike direct fired only water heaters, you can heat the water to higher temperatures while still maintaining exceptional efficiency.
- The Sioux Hybrid has been designed specifically to recirculate to a water storage tank and maintain high efficiency. The ability to heat water to 195°F (91°C), and the use of a modulating burner make the Hybrid design ideal for maintaining tank water temperature.
HWP Series
Hot Water Plant

The HWP was designed to provide heater and storage tank for small to medium size ready mixed concrete plants. The HWP is also ideal for construction sites, such as dams or bridges.

- Standard BTU ratings are 1, 1.7, 2, or 3 million
- Standard primary electricals are 230V/3Ph/60Hz and 460V/3Ph/60Hz
- Available in Oil, LP, Natural Gas or Combination.
- Standard with industrial circulation pump(s) and discharge pump
- Standard tank size is 1,000 or 2,500 gallons (3,785 or 9,464 liters) - Other tank sizes are available.

PWP Series
Precast Water Plant

The PWP Series is designed to provide a complete heater and storage tank for precast concrete plants.

- Standard BTU ratings are 1 or 1.7 million
- Standard primary electricals are 230V/3Ph/60Hz and 460V/3Ph/60Hz
- Available in Oil, LP, Natural Gas or Combination.
- Seven-stage circulation pump and one industrial discharge pump are standard
- Standard tank size is 300 gallons (1,135.6 liters) - Other tank sizes are available.

M-415
Water Heater for Mobile Mixers

The M-415 is designed to easily mount on a volumetric mixer truck for hot water on the go. The 415,000 BTU/HR heater features standard 12 volt DC or optional 120 volt AC burner control, Honeywell protectorelay with flame monitoring burner control, rotary gear type pump with stainless steel shaft, temperature display with adjustable tank temperature control, and a TEFC ½ HP motor. The heater also has electrical controls with on/off switch for water circulation pump and burner. The unit can also easily be connected to the truck’s fuel system. The heater is capable of achieving 100°F temperature rise on 500 gallons (1892.1 liters) of water over one hour.

Note: Heat output is approximate
Water Heater Performance

Performance Chart Notes:
1. All ratings are based upon operation at 70°F (21.1°C) and at sea level conditions.
2. Derate 4% per each 1,000 feet (304.8m) altitude over 3,000 feet (914.4m).

Options and Accessories

**Draft Diverter/Damper Assembly**—Exhaust assembly equalizes stack pressure and helps prevent cold air from entering stack (which may freeze heating coil). 12” (304.8mm) stack opening, 38” (965.2mm) high. One assembly required for each one-million BTU/ hour heater module.

- **SA00274** 18” Motorized Damper
- **SA00154** 12” Motorized Draft Diverter/Damper—115 volt, electrically-operated.
- **SA00157** 12” Motorized Damper

**Water Solenoid/Liquid Level Sensor**—Valve and switch work in tandem to keep water at specified level in customer water tank.

- **FT00815** 1” (25.4mm) Water Solenoid Valve
- **FT00816** 2” (50.4mm) Water Solenoid Valve
- **FT00783** 1-1/2” (25.4-38.1mm) Water Solenoid Valve
- **EC01893** Liquid Level Sensor Switch

**Pumps**—Circulating Pumps circulate water between water holding tank and heater. Loading Pumps move water from water heater tank to truck or other destination.

- **SA00105** Circulating Pumping Station, Seven-Stage, Centrifugal, 3 HP, 230/3/60 or 460/3/60.
- **SA00108** Discharge Pump, Single-Stage, Centrifugal, 2 - 15 HP, 230/3/60 or 460/3/60, Price Brand.

**Rain Cap**—Prevents precipitation from interfering with burner operation in outdoor applications. One rain cap is needed for each one-million BTU/hour heater module. Heavy-duty stainless steel construction on all models.

- **AC00696** 12” (304.8mm) Rain Cap

**Alternate Electricals**—Electrical system other than listed standard. Contact factory.

**Sioux Water Treatment System**—Sioux’s Water Treatment System treats the water by sequestering (binding up) the dissolved scale-causing minerals. A sequestering agent (polyphosphate) is added to the water which binds with the scale-causing minerals and keeps them in solution form, thus preventing hard water scale. This significantly reduces scheduled deliming, and makes descaling of your coil easier and faster, increasing the life of your investment.

- **PM01503** Pulsation Pump
- **AC01246** 55 gallon scale control
- **AC00421** Pre-filter with 140 mesh screen, recommended for use with sandy or dirty water
- **AC00555** 5 gallon jug of liquid Sioux Descaler
- **AC00556** 30 gallon drum of liquid Sioux Descaler
- **AC00794** 55 gallon drum of liquid Sioux Descaler

**Sioux Biodegradable Liquid Descaler**—Excellent at removing scale on systems with existing scale build-up. This biodegradable liquid is formulated to economically and effectively dissolve scale build up in your machines. Sioux Descaler can and should be used to remove scale build-up when needed on all hot water equipment including water heaters.

- **AC00555** 5 gallon jug of liquid Sioux Descaler
- **AC00556** 30 gallon drum of liquid Sioux Descaler
- **AC00794** 55 gallon drum of liquid Sioux Descaler
What Makes Sioux Different?

Since 1939, Sioux has been helping customers in a wide range of industries solve challenging problems by engineering and manufacturing innovative, application-specific equipment. Proven durability and reliability make Sioux the best value for demanding applications.

**Conservative Design**
Sioux does not undersize components such as motors, pumps, burners, frames or engines, which is common elsewhere.

**Proven Performance**
Sioux machines are dependable in the field. Combining high quality components with over 80 years of custom manufacturing experience and extensive engineering design capabilities allows Sioux to provide the industrial workplace with the best equipment for continuous operation.

**Simple Operation**
Sioux machines are designed to be simple to install, operate and maintain.

**Factory Testing**
Every Sioux machine is thoroughly tested in our on-site testing facility before it leaves the factory.

**Custom Capabilities**
Sioux is well-known for its custom capabilities. Specialized options can be added to the unit to meet your specific needs. Some of these include trailer mountings, nearly any voltage for overseas applications, water tanks, alterations for severe temperature or altitudes, custom sizes and more.

**Safety**
In addition to dependability and simple operation, operator safety is a top design consideration for all Sioux products.
